José Osvaldo Constantino Bautista

Santiago de Querétaro, Mexico • joseconstantino987@gmail.com • 351 513 1829 • github.com/osvi-dev

Summary

Computer Systems Engineer with experience in DevOps, Cloud Infrastructure, and MLOps. Proven track record in designing and deploying real-time monitoring and observability architectures, automating infrastructure using Jenkins CI/CD pipelines under GitOps practices, and securely managing Kubernetes clusters. Focused on high availability, fault tolerance, and continuous delivery.

Education

DEV.F *Remote, Mexico*
Bootcamp in Master in Data Science with AI *Jan 2026 – July 2026*

Instituto Tecnológico de Morelia *Morelia, Michoacán, Mexico*
Bachelor's Degree in Computer Systems Engineering *Jan 2021 – Dec 2025*

- Course Instructor: Machine Learning for Dummies (March 2024)
- IEEE Computer Society Student Branch Member (August 2022 – July 2025)

Skills

DevOps & GitOps: Kubernetes, Docker, Jenkins, GitOps (Flet), Kong API Gateway, Vagrant

Observability & Monitoring: Prometheus, Grafana, Blackbox Exporter, Alertmanager

Infrastructure & OS: Linux (Ubuntu Server, Debian, CentOS), Apache Server, Nginx, Bash Scripting, SSH

Development & DB: Python, PostgreSQL, MySQL, Django REST Framework, PHP, Git/GitHub

MLOps & Data Science: Ollama (Local LLMs), LangChain, Pandas, NumPy, Scikit-learn, Jupyter Notebooks

Languages: Spanish (Native), English (B2)

Professional Experience

DevOps Engineer *Morelia, Michoacán, Mexico*
Gob. Digital, Sec. de Finanzas y Administración *Feb 2026 – present*

- Designed and implemented a centralized monitoring architecture using Prometheus and Blackbox Exporter to probe service availability and latency via structured HTTP (GET/POST) requests; integrated interactive Grafana dashboards (latency metrics, SSL certificate expiration, and uptime history) and automated critical email alerts via Alertmanager, significantly reducing Mean Time to Resolution (MTTR).
- Programmed and orchestrated automated Jenkins CI/CD pipelines following GitOps methodology, integrating Bash scripts for scheduled and secure database backups, eliminating manual intervention and mitigating data loss risks.
- Collaborated on the development of an internal tool using Flet and Kubernetes under GitOps practices to orchestrate the smooth migration of backend and frontend projects into a Kubernetes cluster, ensuring fault tolerance, automated scaling, and high availability.
- Participated in designing and integrating an API Gateway using Kong and Kong Deck on a dedicated server to centralize incoming traffic management, hardening security via protected routing and establishing mutual TLS (mTLS) authentication to secure communications with on-premise servers.

Software & DevOps Engineer (Professional Residency) *Morelia, Michoacán, Mexico*
Escuela Nacional de Estudios Superiores (ENES), UNAM *Aug 2025 – Dec 2025*

- Implemented Natural Language Processing (NLP) workflows integrating local LLMs (DeepSeek-R1, Llama 3.1) via Ollama to automate analysis and feedback generation on PDF documents.
- Designed automated deployment pipelines with Jenkins and established reproducible development environments using Vagrant, completely eliminating dependency conflicts.
- Engineered structured prompts (Chain of Thought) and performed performance benchmarking in Python, achieving reductions in model response times.
- Developed an asynchronous communication layer (PHP/AJAX) for Moodle, seamlessly connecting the e-learning platform with AI microservices.

Strategic Analysis Intern *Morelia, Michoacán, Mexico*
Gobierno Digital Michoacán *Oct 2024 – June 2025*

- Co-designed a Retrieval-Augmented Generation (RAG) system for large-scale document analysis, using Python and LangChain to dynamically expand the local knowledge base.
- Refactored complex queries and redesigned relational schemas in PostgreSQL and MySQL, achieving a 30% optimization in database query response times.

Leadership and Activities

Member and Event Organizer *Morelia, Michoacán, Mexico*
Rama Estudiantil de la IEEE Computer Society *Aug 2022 – July 2025*

- Coordinated Teknhé, a technical event focused on Cloud Computing, Machine Learning, and Networking.
